1 Advanced Data Handling

Find the lower quartile, upper quartile and interquartile range for each of these sets of data:

a) 4, 5, 7, 8, 8, 8, 9, 10, 10

b) 8, 9, 11, 12, 12, 12, 14, 14, 15, 17

c) 7.1, 7.2, 7.4, 7.4, 7.5

d) 19, 29, 31, 21, 28, 27, 24

e) 0.6, 0.23, 0.2, 0.7, 0.14, 0.1, 0.68

f) 20, 31, 25, 45, 46, 20, 34, 31

Fluency Practice

Find the median, lower quartile, upper quartile and interquartile range for each of these sets of data.

- (a) 5, 7, 7, 8, 10, 12, 13
- (b) 18, 14, 20, 13, 17, 16, 16
- (c) 7, 4, 6, 7, 9, 5, 4, 8, 3, 10, 5
- (d) 3.5, 7.1, 2.7, 6.3, 4.9, 7.0, 3.7
- (e) 4, 2, 2, 3, 1, 5, 4, 4, 3, 6, 3
- (f) 6, 9, -2, 0, -3, 1, 6, 4, -5, 8, 3

The number of goals scored in each of Bury United's last eleven matches is:

0, 2, 0, 1, 1, 4, 0, 2, 3, 1, 2

Find the median number of goals scored and the interquartile range.

Over Wigan United's last seven matches their median number of goals scored was 1 and their interquartile range of goals scored was 3. Make two comparisons between the two sets of data.

The English test results for 11 students in each of classes 8A and 8B are shown below.

8A	64	37	52	87	57
61	89	49	68	55	39

8B	71	92	63	83	81
62	55	48	84	90	73

(a) By finding the median and interquartile range, compare the two sets of results.

(b) The teacher of 8B has marked one question incorrectly, and all student marks in 8B go up by 1. How does this affect the median and interquartile range?

Problem Solving

For each statement, decide if its possible and suggest 7 values that fit the description

The interquartile range is equal to the range	
The interquartile range is equal to the median	
The interquartile range is larger than the range	
The upper quartile is equal to the median	
The median is 0 and the interquartile range is 5	
The range is negative	
The upper quartile is 1 and the range is 5

Mean from a Grouped Frequency Tables

- 1) A bakery recorded how much each of its first 15 customers spent. Each customer is represented by a dot on the scale.

To process the data, we can put customers into 4 groups.

Spent, s (£)	Frequency (f)	Midpoint Value (m)	Estimated Group Spending ($f \times m$)
$0 < s \leq 2$	4	1	4
$2 < s \leq 4$	4	3	12
$4 < s \leq 6$			
$6 < s \leq 8$			
Totals			

To calculate an average, we assume each customer spent the group midpoint value.

Using midpoints & frequencies we can estimate the spending for each group.

- Sum the spending estimates for each group to find a total.
- Divide this by the number of customers to find an estimate for the mean.
- Where is the median? Which group is it in?
- Which group is the modal group (the highest frequency group)?
- What is the actual mode?

- 2) Complete the **Grouped Frequency Table** using this data.

Spent, s (£)	Frequency (f)	Midpoint Value (m)	Estimated Group Spending ($f \times m$)
$0 < s \leq 4$			
Totals			

- a) Use the table to estimate the mean.

- 3) A t-shirt shop recorded customer purchases during one day.
a) Decide how to group the data. Complete a grouped frequency table & calculate an estimate for the mean.

(Groups should be the same width. Think about easy-to-calculate midpoints).

Anne's tallest friend is 140 cm tall. Her shortest friend is 120 cm tall. Anne and her four other friends are between these heights. What is a good **estimate of the mean height** of Anne's **group** of friends?

When we use data that is in **groups**, we must use the **midpoint** of each group to **estimate** averages.

The frequency table below shows the height of everyone in Anne's class.

- 1) Which groups are these students in?

Alice is 132 cm tall. Arjun is 130 cm tall. Andy is 140 cm tall.

Height, h (cm)	Frequency	Group Midpoint	Estimated Group Value (Frequency × Midpoint)

- 11 Another triangle has a height of x cm, and its base is 11 cm shorter than its height.

- a Sketch the triangle and mark on your sketch its height and base.
 b Write down an expression for its area.
 c If its area is 13 cm^2 , calculate both its height and its base.

- 12 This right-angled triangle has sides x cm, $x + 1$ cm and 5 cm long.

Use Pythagoras' Theorem to write down an equation in x , and solve it to find the value of x .

This right-angled triangle has sides of x cm, $x + 7$ cm and 13 cm.
 Use Pythagoras' Theorem to write down an equation in x , and solve it to find the value of x .

- 13 A right-angled triangle has a hypotenuse 10 cm long and a base x cm long.
 a Sketch the triangle and mark on it these two lengths.
 b If the perimeter of the triangle is 24 cm, write down an expression for the height of the triangle in terms of x .
 c If the area of the triangle is 24 cm^2 , write down an equation and solve it to find the value of x .
- 14 Another right-angled triangle has a hypotenuse 26 cm long and a base x cm long.
 a Sketch the triangle and mark on it the two lengths given above.
 b If the triangle has a perimeter of 60 cm, write down an expression for the height of the triangle.
 c The area of the triangle is 120 cm^2 . Write an equation for x , and solve it to find the base and height.

- 15 This rectangle has a perimeter of 30 cm and a width of x cm.

- a Write down an expression for its length in terms of x .
 b If its area is 50 cm^2 , construct an equation in x and solve it to find the value of x .

- 16 Another rectangle has a perimeter of 22 cm and a width of x cm.
 a Write down an expression for the length of the rectangle in terms of x .
 b If the area of the rectangle is 28 cm^2 , construct an equation and then solve it to find the width and the length of the rectangle.

- 17 A rectangular carpet has a perimeter of 26 metres.

- a If its width is x m, write down its length in terms of x .
 b The area of the carpet is 40 m^2 . Calculate its width and its length.

- 18 This room is 3 metres high and x metres wide. Its length is 2 metres more than its width. If its volume is 72 m^3 , calculate the value of x .

- 20 This cardboard box is 4 cm tall and x cm wide. It is 5 cm longer than it is wide. If its volume is 96 cm^3 , calculate the value of x .

- 21 This room has a square floor of side x metres. Its height is 3 metres. Write down an expression for
- the area of its floor
 - the area of one side wall.
 - If the total area of its floor, ceiling and four walls is 80 m^2 , form an equation and solve it to find the value of x .

- 22 Another room is as high as it is wide. Its length is 8 metres.
- Sketch the room and, taking x metres as its width, write the dimensions on the sketch.
 - Write the area of its floor in terms of x .
 - Write the area of each of its walls in terms of x .
 - If the total area of its four walls is 96 m^2 , form an equation and solve it to find the value of x .
 - What is the volume of the room in m^3 ?

- 23 A rectangular floor is 9 metres by x metres, and a square carpet of side x metres is placed as shown over part of the floor.

- Write an expression for the area of the floor.
- Write an expression for the area of the carpet.
- If the area of floor not covered by the carpet is 18 m^2 , form an equation and solve it to find the value of x .

- 24 A square floor of side x metres is partly covered by a rectangular carpet 6 metres wide and x metres long as shown in the diagram.

- Write an expression for the area of the whole floor.
- Write an expression for the area of the carpet.
- If the area of the floor not covered with carpet is 16 m^2 , construct an equation and solve it to find the value of x .

- 25 A square carpet of side x metres is laid in the corner of a room as shown, leaving gaps of 1 metre and 4 metres along the edges of the room.

- Write expressions for the width and the length of the room.
- If the area of the whole floor is 28 m^2 , construct an equation in x and solve it to find the value of x .
- What are the width and the length of the room?

Purposeful Practice

- 26 A rectangular garden has a square lawn in one corner, leaving an L-shaped flower bed with 2 metre and 5 metre lengths as shown.
- Write expressions for the length and width of the whole garden.
 - If the area of the whole garden is 54 m^2 , form an equation and solve it for x .
 - What is the perimeter of the garden?

- 27 This rectangular garden has a lawn 8 m by 6 m with a path x metres wide along two sides of the lawn.
- Write expressions for the total width and total length of the garden.
 - If the garden has an area of 80 m^2 , write an equation involving x , and solve it.
 - What is the width and the length of the whole garden?

- 28 A photograph 8 cm by 10 cm has a border x cm wide all the way round it.

- Write expressions for the total width and the total length of the display.
 - If the total area is 168 cm^2 , write an equation and solve it to find the value of x .
 - Calculate the area of the border.
- 29 A rectangular garden 16 m by 10 m has a central rectangular lawn surrounded by a path.
- Draw a diagram of the garden and label the lawn and the path.
 - If the path is x metres wide, write expressions for the width and the length of the lawn.
 - If the area of the lawn is 112 m^2 , form an equation and solve it to find the value of x .
 - Calculate the area of the path.
- 30 A square has sides x cm long. A larger square has sides 2 cm longer than this. Write, in terms of x ,
- the length of one side of the larger square
 - the area of the larger square
 - the area of the smaller square.
 - If the total area of both squares is 34 cm^2 , find the value of x .

Solving Harder Quadratic Equations in Context

(a)

The shape shown has an area of 13 cm^2 . All lengths on the diagram are in cm.

(i) Show that $5x^2 + 3x - 14 = 0$

(ii) Hence, find the value of x and the dimensions of the shape.

(b)

The cylinder shown has a total surface area of $78\pi \text{ cm}^2$. All lengths on the diagram are in centimetres.

(i) Show that $4x^2 - x - 39 = 0$

(ii) Hence, find the value of x and the height of the cylinder.

(c)

The trapezium shown has an area of 30 cm^2 . All lengths on the diagram are in centimetres.

(i) Show that $6x^2 + 5x - 34 = 0$

(ii) Hence, find the value of x and the dimensions of the trapezium.

(d)

A right-angled triangle has sides of lengths $(x + 1) \text{ cm}$, $(3x - 2) \text{ cm}$ and $(4x - 3) \text{ cm}$ as shown.

(i) Show that $3x^2 - 7x + 2 = 0$

(ii) Hence find the value of x and the length of the hypotenuse.

Forming & Solving Quadratic Equations

Form an equation in terms of x .
Solve to find possible values of x .

A rectangle has a width of x .
The rectangle's length is twice its width.
The area of the rectangle is 98 cm^2 .
Form & solve an equation to find x .

Can we have a rectangle with
negative side lengths?

A 432 m^2 field has a length triple its width.
Form then solve an equation to find x
& calculate the length of the field.

The length of this rectangle is
2 cm longer than its width.
We can form & solve an equation to find x .

$$\begin{aligned} x(x + 2) &= 35 \\ x^2 + 2x &= 35 \\ x^2 + 2x - 35 &= 0 \end{aligned}$$

Factorise the expression into two brackets to
find 2 possible values for x .

Which value of x makes sense in real-life?

Form & solve equations to
find the dimensions of these rectangles.

Which value for x would we use in real life?

A square is extended by 5 metres on one side and
4 metres on another to make a rectangle with
an area of 56 m^2 .

$$(x + 4)(x + 5) = 56$$

Expand this, then create
an equation you can factorise & solve.

If we think about the original square,
which value for x *makes sense*?

Find the values of x for these rectangles.
Which value makes sense in real-life?

Purposeful Practice

The following questions may lead to quadratic equations that do not factorise. Always check whether a quadratic equation will factorise before using the formula. If an answer is not exact give it correct to 3 s.f.

1. The sum of two numbers is 10 and the sum of their squares is 80. Find them.
2. The sum of two numbers is 9 and the difference between their squares is 60. Find them.
3. Find a number such that the sum of the number and its reciprocal is 20. In this case give the answers correct to 2 decimal places.
4. One side of a rectangle is 3 cm longer than another. Find the sides if the area of the rectangle is 20 cm^2 .
5. Find the length of the hypotenuse of a right-angled triangle whose sides are $x\text{ cm}$, $(x + 1)\text{ cm}$ and $(x + 3)\text{ cm}$.
6. The parallel sides of a trapezium are $(x - 2)\text{ cm}$ and $(x + 4)\text{ cm}$ long. If the distance between the parallel sides is $x\text{ cm}$ and the area of the trapezium is 42 cm^2 find its dimensions.
7. A rectangular block is 2 cm wider than it is high and twice as long as it is wide. If its total surface area is 190 cm^2 find its dimensions.
8. Sally is x years old. Her mother's age is $(x^2 - 4)$ years and her father is 6 years older than her mother. If the combined age of all three is 76 years form an equation in x and solve it. How old is her father?

These rectangles are similar.

What can we deduce about the relationship between x and y ?

The length and width are in the same ratio.

$$4 : 1 = x : y$$

Therefore, $\frac{4}{1} = \frac{x}{y}$ and $\frac{1}{4} = \frac{y}{x}$

We can rearrange these equations to express x in terms of y and vice-versa.

$$x = 4y \quad y = \frac{x}{4}$$

A bag contains black and white cubes in the ratio 1:2
3 black cubes are added and the ratio becomes 3:5

then	$x : 2x$	$= 1 : 2$	$15 : 30$
now	$x + 3 : 2x$	$= 3 : 5$	$18 : 30$

$$\frac{x + 3}{2x} = \frac{3}{5}$$

$$5(x + 3) = 2x(3)$$

$$5x + 15 = 6x$$

$$15 = x$$

Changing Ratios

①

A bag contains black and white cubes in the ratio 1:2
4 black cubes are added and the ratio becomes 3:5
How many white cubes are there?

then	$x : 2x$	$= 1 : 2$
now		$= 3 : 5$

②

In a bag, black cubes : grey cubes = 1:3
2 black cubes are added and
the ratio becomes 2:5
How many black cubes are there now?
 $x : 3x$

③

In a bag, red cubes : grey cubes = 2:3
10 red cubes are added and
the ratio becomes 3:2
How many red cubes are there now?

④

In a bag, red cubes : blue cubes = 3:4
6 red cubes are added and
the ratio becomes 4:5
How many red cubes are there now?

⑤

In a bag, green : blue cubes = 4:5
2 green cubes are **removed** and
the ratio becomes 3:4
How many cubes are there now?
 $4x - 2 :$

⑥

In a bag, grey : blue cubes = 3:7
4 grey cubes are removed and
the ratio becomes 2:5
How many blue cubes are there?

⑦

In a sports club, adults : teens = 5:8
2 adults join **and** 8 teens join and
the ratio becomes 1:2
How many adults are there now?
 $5x + 2 :$

⑧

In a sports club, adults : teens = 2:3
2 adults join and 4 teens **leave** and
the ratio becomes 5:4
How many people are in the club now?

⑨

There are 80% more adults than teens in a sports club.
9 adults leave and 2 teens join and
the adult:teen ratio becomes 3:2
Now 3 teens join the club. As a percentage,
how many more adults than teens are there?

Write the ratio of the value of the 2p coins to the value of 50p coins in its simplest form.

Question 18: Mrs Chambers is organising a school trip to a museum for year 7 and year 8.

She needs to work out the total cost of the museum tickets and bus hire.

The table below shows the museum ticket prices.

Visitor Age	Price
0 - 3	free
4 - 12	£4.50
13 - 17	£6.50
18+	£11.50

Each bus has 51 seats and costs £125

Altogether 300 students want to go on the trip.

The ratio of the number of students to the number of teachers is 25:1

The ratio of the number of students in year 7 to the number of students in year 8 is 8:7

At the time of the trip, all of the students in year 7 are 11 or 12 years old.

Of year 8 students, the ratio of number of 12 year olds to 13 year olds is 2:3.

Work out the total price of the school trip.

Question 19: Alannah, Colin and Hannah visit the park and collect conkers and acorns.

In total they collect the same number of conkers and acorns.

Alannah, Colin and Hannah collect conkers in the ratio 4:7:9
Alannah, Colin and Hannah collect acorns in the ratio 3:1:5

(a) Did Hannah collect more conkers or acorns?

(b) What is the lowest possible number of conkers they could have collected?

Question 20: A bag contains red, yellow and blue beads.

The ratio of red beads to yellow beads is 2:3

The ratio of yellow beads to blue beads is 5:4

Work out what fraction of the beads are red.

Question 21: In a box

the number of blue counters and the number green counters are in the ratio 7:4
the number of green counters and the number of red counters are in the ratio 3:1

The total number of counters in the bag is 444.

How many green counters are in the bag?

Question 22: The ratio of the red cards to black cards in a deck is 3:10
2 more red cards are added to the deck.

The ratio of red cards to black cards is now 1:3

Work out the number of black cards in the deck.

Question 23: A is the point with coordinates (3, 20)

B is the point with coordinates (15, 2)

N is a point of the line AB such that $AN : NB = 2 : 1$

Find the coordinates of the point N.

Question 24: Bag A contains 5x coins.

Bag B contains 3x coins.

8 coins are taken from Bag B and put into Bag A

The ratio of coins in Bag A to Bag B is now 11:5

Work out the total number of coins.

Question 25: A cone has radius 4cm and perpendicular height of 9cm.
A sphere has a radius of 6cm

Volume of a sphere $\frac{4}{3}\pi r^3$

Volume of a cone $\frac{1}{3}\pi r^2 h$

Calculate the ratio of the volume of the cone to the volume of the sphere.

Question 26: On 1st March 2001, the ratio of Freddie's age to his mother's age was 1:11
On 1st March 2018, the ratio of Freddie's age to his mother's age was 2:5
Write the ratio of Freddie's age to his mother's age on 1st March 2030

Question 27: The ratio 25 000 000 000 : 500 can be written in the form $n : 1$
Work out the value of n

Give your answer in standard form

Question 28: The distance of Mercury from the Sun is 5.7×10^7 km
The distance of Neptune from the Sun is 4.3×10^9 km

Work out the ratio of the distance of Mercury from the Sun to the distance of Neptune from the Sun.

Question 29: Class 10D make some cakes using milk chocolate, dark chocolate or white chocolate.
Some of the cakes contain nuts and the rest do not.

The ratio of the number of milk chocolate cakes to dark chocolate cakes is 10:3
The ratio of the number of white chocolate cakes to milk chocolate cakes is 1:6

Of the milk chocolate cakes, the ratio of the number of cakes containing nuts to not containing nuts is 1:8

Of the dark chocolate cakes, the ratio of the number of cakes containing nuts to not containing nuts is 3:2

Of the white chocolate cakes, the ratio of the number of cakes containing nuts to not containing nuts is 2:5

What percentage of the cakes contain nuts?
